

デジタルでみる

身近な生きものの世界

# 東京自然しいきものの展

## Aims of the Tokyo Nature & Wildlife Exhibition

Tokyo has one of Japan's most diverse natural environments. At this exhibition, you can learn about the diversity of nature and wildlife in Tokyo through hands-on displays that use a range of digital technology, such as high-resolution video content at 8K or shot with 360-degree underwater cameras, and mapping content using AR.

Visitors can use technology to glimpse parts of nature rarely seen, such as wildlife on islands or in rivers. Some of the content also allows visitors to experience Tokyo's nature while enjoying quiz-style contents and sound games using wildlife calls. Our hope is that visitors will see, touch, move, and experience the world of familiar wildlife, learn about the nature of Tokyo, and use this as an opportunity to venture out into it.
